

FOR IMMEDIATE RELEASE

Logiq Attain NCSC Assured Security Architecture Status

Bristol, UK – 01 May, 2024 – Logiq Consulting, a leading UK information and cyber security consultancy have attained further endorsement from the National Cyber Security Centre (NCSC) in recognition of the company’s demonstratable cyber security expertise.

Having first gained Assured Cyber Security Consultancy (ACSC) status for Risk Management in mid-2023, Logiq have now added to this achievement becoming an Assured Consultancy for Security Architecture. This certification requires specialised knowledge in designing secure systems and infrastructure, particularly for organisations in critical sectors with complex requirements—an area in which Logiq excels. Indeed, no stranger to the demands of regulated sectors, Logiq’s core client-base includes the Ministry of Defence, Central Government, Civil Nuclear, and the wider public and private sector.

As the UK’s Technical Authority for cyber threats, the NCSC and its pathways to assured consultancy set a benchmark aiming to ensure increased credibility through enhanced client trust and signifies that consultancies meet the UK government’s exacting standards.

Adding to a growing list of industry accolades in recognition of the company’s advanced cyber solutions and professionalism, the two NCSC ACSC services enable Logiq to help organisations navigate the requirements of the Cyber Assessment Framework (CAF), operating as an Assured Independent Reviewer under the GovAssure scheme.

Commenting on the consultancy’s most recent attainment, Logiq Risk Management Head Consultant and Founding Partner, Rich Forder, said: “Achieving NCSC assurance for Security Architecture underpins our ethos of innovation and our ability to deliver systems and services which are ‘Secure by Design’ – continually evolving our processes and skills and adhering to industry standards and client requirements, regardless of organisational scale or complexity. It also further illustrates the breadth of talent within Logiq and demonstrates we continue to deliver excellence to our clients.”

Already well regarded within Government for the extensive collaboration and co-development that recently resulted in the Ministry of Defence’s Secure by Design programme; attaining ACSC status for Security Architecture further solidifies Logiq Consulting’s position as one of the UK’s preeminent cyber security consultancies—a consultancy at the forefront of delivering innovative solutions in line with the stringent demands of highly regulated clients.
