

Principal Solution Architect (Cloud)

Logiq Consulting are Cyber Security and Information Assurance experts. We specialise in providing leading edge consultancy to high-threat clients, as well as delivering a range of security services and products throughout the Private and Public Sector.

Due to a rapid increase in clients within our Architecture Consultancy Practice, we have a requirement for experienced Cloud Solution Architects to join our expanding Cloud Systems delivery team.

The breadth of projects will range from small scale rapid deliveries, to complex business transformation and adoption on a large scale, leading to a variety of interesting and challenging endeavours at any one time.

As well as what is a fantastic opportunity for the right person integrate themselves into our business and be part of what is already a very successful service offering, Logiq can also offer an amazing work life balance hinged around what we feel is an exceptional company culture.

The Role:

- Cloud technologies, primarily AWS and/or Azure.
- Designing scalable applications and infrastructure using cloud native services.
- Delivering scalable, highly available and resilient solutions to cloud environments.
- Communicating complex solutions to non-technical business stakeholders
- Implementing DevOps practices such as continuous integration and automated deployment (CI/CD) pipelines to run Infrastructure as Code (IaC).
- Designing, implementing, and orchestrating microservice architectures using container technologies (e.g., Docker, Kubernetes, OpenShift).

Required Skills and Qualifications:

- Cloud technologies, primarily AWS and/or Azure.
- Designing scalable applications and infrastructure using cloud native services.
- Delivering scalable, highly available and resilient solutions to cloud environments.
- Communicating complex solutions to non-technical business stakeholders
- Implementing DevOps practices such as continuous integration and automated deployment (CI/CD) pipelines to run Infrastructure as Code (IaC)
- Designing, implementing, and orchestrating microservice architectures using container technologies (e.g., Docker, Kubernetes, OpenShift)
