

Technical Architect – Secure Services

Logiq Consulting is a modern Cyber Security Consultancy that is thriving in a competitive workspace. Working at an expert level across all functions of the business, we are able to keep a consistent growth plan, offering our staff both a secure and interesting workload, as well as a healthy level of career opportunities as we grow.

Due to a rapid increase in clients within our Secure Services Team, we have a requirement for a Technical Architect to join our growing team. The ideal candidate will have current or recent experience working with M365, Azure and Powershell.

As well as what is a fantastic opportunity for the right person integrate themselves into our business and be part of what is already a very successful service offering, Logiq can also offer an amazing work life balance hinged around what we feel is an exceptional company culture.

The Role:

The successful candidate will join our team as a Technical Architect, establishing, maintaining and supporting the Secure Services offering, for multiple clients. The Technical Architect will also undertake technical hands-on activities, and will be familiar with operating, managing, securing, and optimising a cloud technology. You should be able to enable continual improvement through overseeing and supporting the life cycle of the technology platforms and implementing new capabilities.

Key Responsibilities:

- Design and deploy cloud solutions that meet business requirements and industry best practices.
- Optimize and manage cloud resources to ensure cost-efficiency and performance.
- Implement automation and scripting for provisioning, configuration, and maintenance of cloud resources.
- Monitor cloud services for availability, performance, and security, and take proactive measures to address any issues.
- Participate in customer meetings to gather solution requirements and propose solutions to meet requirements.
- Stay up to date with the latest cloud technologies and trends to recommend improvements and innovations.

Required Skills and Qualifications:

- Experience with managing and maintaining multi-tenant M365 environments.
- A broad understanding of Microsoft Cloud technologies like Teams, Exchange, Endpoint Manager and SharePoint etc.
- Proven experience with Microsoft Entra security solutions and Defender.
- A deep understanding of the complexities of M365 tenant configuration.
- A passion for continual improvement of the platform.
- Proficiency in programming and scripting languages (e.g., Python, Bash, PowerShell)

Essential Skills:

Experience in Service Automation, identifying & implementation of service improvements using technologies such as PowerShell, Azure DevOps.

- A Deep understanding of Microsoft Cloud Technologies, across M365 and Azure
- Experience with security compliance & auditing.
- An understanding and experience of what is required when working in a security focused environment.
- Proven experience in the design, execution and optimisation of technical platforms & services including EntraID, Azure IaaS/PaaS, Windows Operating Systems as well as basic networking skills.
- Strong personal skills, and the ability to communicate technical solutions in an understandable way.
- Ability to mature, define policy supporting and grow the use of emerging Cloud services.

Desirable Skills:

- Experience working in a multitenant Azure environment.
- Some experience with Microsoft Sentinel would be advantageous.
- Desirable Certifications, Qualifications Experience:
- Microsoft 365 Fundamentals
- Microsoft Certified: Azure Fundamentals/Administrator, Azure Security Technologies
- ITIL Foundation

Company benefits include:

- Discretionary 10% bonus
- Discretionary 2k annual training fund per employee
- Very competitive pension scheme
- Virtual GP
- Annual Eye Test
